Adjust..... Final test.....
Inhale..... Leak test.....
Test 1st stage 20/200 I.P. pressure stable.....
Product APO241 / APO219 x2
Product.....
Comments.....

IMPORTANT

We recommend you test serviced equipment in a safe confined water such as a swimming pool prior to use in open water.

We have to wet test valves, most manufacturers suggest you perform a vacuum test prior to use, in addition to any normal equipment checks.

It is our professional training and advice from the equipment suppliers or manufacturers, however we reserve the right to use our judgement in the servicing of equipment as to which parts to replace. This does not affect statutory rights.

We will not inspect or replace service kit parts without your permission, such as mouthpieces. Consoles are not inspected or replaced, unless specifically asked, consoles are not serviced.

All work is guaranteed for 3 months if tamper paint seals are unbroken. Some valves may require slight adjustment every 3 months, if you feel your valve has bedded in slightly loose or tight, please call in for inspection and adjustment while you wait.

If your valve has a strange taste, don't be alarmed, we only use non toxic cleaning agents and this taste will disappear.
